

# News Release

Note: Reposted Feb. 3, 2022, to correct state personal income statistics for the third quarter of 2021 back to the first quarter of 2016 due to a data processing error involving industry wage estimates. For more information, see the <u>technical note</u>.

EMBARGOED UNTIL RELEASE AT 8:30 A.M. EST, Friday, December 17, 2021 BEA 21–65

Technical: Matthew von Kerczek (301) 278-9250 <u>REIS@bea.gov</u>

Mauricio Ortiz (301) 278-9269

Media: Jeannine Aversa (301) 278-9003 <u>Jeannine.Aversa@bea.gov</u>

# Personal Income by State, 3rd Quarter 2021

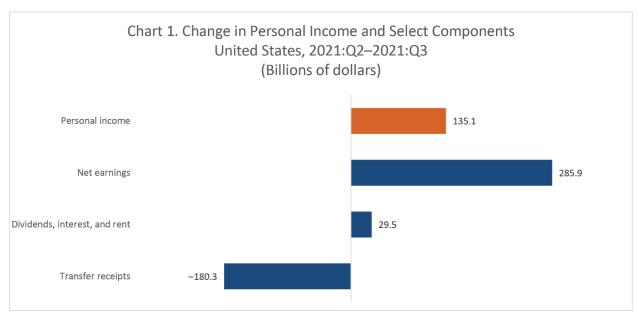

State personal income increased 2.6 percent at an annual rate in the third quarter of 2021 after decreasing 20.2 percent in the second quarter, according to estimates released today by the U.S. Bureau of Economic Analysis (BEA) (table 1). The percent change in personal income across all states ranged from 6.7 percent in Kentucky to –4.5 percent in North Dakota.

U.S. Bureau of Economic Analysis

In the third quarter of 2021, increases in earnings and property income (dividends, interest, and rent) more than offset a decrease in transfer receipts (chart 1).

U.S. Bureau of Economic Analysis

### Coronavirus (COVID-19) Impact on Third-Quarter 2021 State Personal Income Estimates

The 2021 third-quarter estimates of state personal income reflect the continued economic impacts related to the COVID-19 pandemic. Government pandemic assistance payments to households and business decreased. The full economic effects of the COVID-19 pandemic cannot be quantified in the state personal income estimates because the impacts are generally embedded in source data and cannot be separately identified. For more information, see Federal Recovery Programs and BEA Statistics.

**Earnings.** For the nation, earnings increased 9.3 percent in the third quarter of 2021 after increasing 14.4 percent in the second quarter (table 2). The increase in earnings reflected the continued economic recovery following the partial economic shutdown that began in the first quarter of 2020 after the start of the COVID-19 pandemic.

- In Kentucky, the state with the largest increase in personal income, increases in earnings in transportation and warehousing; and healthcare and social assistance were the leading contributors to the increase in personal income in the third quarter (table 3).
- In Colorado, the state with the second largest increase in personal income, increases in earnings in professional, scientific, and technical services; and mining were the leading contributors to the increase in personal income in the third quarter.

Earnings increased in 21 of the 24 industries for which BEA prepares quarterly estimates (table 4). Professional, scientific, and technical services; accommodation and food services; and state and local government were the leading contributors to the overall growth in earnings. The percent change in earnings across all states ranged from 14.8 percent in Hawaii to –1.9 percent in North Dakota (table 2).

**Property income.** Property income increased 3.3 percent for the nation in the third quarter of 2021 after increasing 3.7 percent in the second quarter. The percent change in property income across all states ranged from 4.9 percent in Oregon to 1.6 percent in Connecticut (table 2).

**Transfer receipts.** Transfer receipts decreased 15.6 percent for the nation in the third quarter of 2021 after decreasing 72.6 percent in the second quarter. The decrease in transfer receipts was due to decreases in state unemployment insurance compensation and all other transfer receipts. The decrease in state unemployment compensation was due in part to the expiration of Pandemic Unemployment Compensation Payments (PUCP) benefits, and to an improved labor market. The decrease in all other transfers was due mostly to lower Economic Impact Payments in the third quarter. The percent change in transfer receipts across all states ranged from 4.1 percent in Kentucky to –25.4 percent in Massachusetts (table 2).

- In North Dakota, the state with the largest decrease in personal income, decreases in transfer receipts and farm earnings were the leading contributors to the decrease in personal income in the third quarter.
- In New Hampshire, the state with the second largest decrease in personal income, decreases in transfer receipts and in management of companies' earnings were the leading contributors to the decrease in personal income in the third quarter.

#### **Updates to State Personal Income**

Today, BEA also released revised quarterly estimates of personal income for the first quarter of 2021 through the second quarter of 2021. Updates were made to incorporate source data that are more complete and more detailed than previously available and to align the states with revised national estimates that were released on November 24, 2021.

BEA state per capita personal income statistics are calculated using Census Bureau midyear population estimates. These annual midyear estimates are based on the 2010 census and do not incorporate the results of the 2020 census. BEA will incorporate Census Bureau midyear population estimates based on the 2020 census results when they become available.

Next release: March 23, 2022, at 8:30 a.m. EDT Personal Income by State, 4th Quarter 2021 and Year 2021 (Preliminary)

# **Additional Information**

#### Resources

- Information on COVID-19 and recovery impacts is available on our website.
- Stay informed about BEA developments by reading <u>The BEA Wire</u>, signing up for BEA's <u>email</u> <u>subscription service</u>, or following BEA on Twitter <u>@BEA News</u>.
- Historical time series for these estimates can be accessed in BEA's <u>Interactive Data Application</u>.
- Access BEA data by registering for BEA's Data <u>Application Programming Interface</u>.
- For more on BEA's statistics, see our monthly online journal, the <u>Survey of Current Business</u>.
- For upcoming economic indicators, see BEA's news release schedule.
- BEA Regional Facts (<u>BEARFACTS</u>) is a narrative summary of personal income, per capita personal income, components of income, and gross domestic product for counties, metropolitan statistical areas, and states.
- Complete information on the sources and methods for the estimation of <u>BEA's State</u> <u>Personal Income and Employment</u>.

#### **Definitions**

**Personal income** is the income received by, or on behalf of, all persons from all sources: from participation as laborers in production, from owning a home or business, from the ownership of financial assets, and from government and business in the form of transfers. It includes income from domestic sources as well as the rest of world. It does not include realized or unrealized capital gains or losses.

**Per capita personal income** is calculated as the total personal income of the residents of a state divided by the population of the state. In computing per capita personal income, BEA uses midquarter population estimates based on unpublished Census Bureau data.

**Earnings by place of work** is the sum of wages and salaries, supplements to wages and salaries, and proprietors' income. BEA's industry estimates are presented on an earnings by place-of-work basis.

**Net earnings by place of residence** is earnings by place of work less contributions for government social insurance plus an adjustment to convert earnings by place of work to a place-of-residence basis. BEA presents net earnings on an all-industry level.

**Property income** is rental income of persons, personal dividend income, and personal interest income.

Personal current transfer receipts are benefits received by persons from federal, state, and local governments and from businesses for which no current services are performed. They include retirement and disability insurance benefits (mainly social security), medical benefits (mainly Medicare and Medicaid), income maintenance benefits, unemployment insurance compensation, veterans' benefits, and federal education and training assistance.

Personal income is measured before the deduction of personal income taxes and other personal taxes and is reported in current dollars (no adjustment is made for price changes).

The estimate of personal income for the United States is the sum of the state estimates and the estimate for the District of Columbia; it differs slightly from the estimate of personal income in the National Income and Product Accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

#### Statistical conventions

Quarter-to-quarter percent changes are calculated from unrounded data and are annualized. Annualized growth rates show the rate of change that would have occurred had the pattern been repeated over four quarters (1 year). Annualized rates of change can be calculated as follows: (((level of later quarter / level of earlier quarter)^4)-1)\*100. Quarterly estimates are expressed at seasonally adjusted annual rates unless otherwise specified. Quarter-to-quarter dollar changes are differences between published estimates.

## **BEA regions**

BEA groups all 50 states and the District of Columbia into 8 distinct regions for purposes of presentation and analysis as follows:

**New England** (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont)

**Mideast** (Delaware, District of Columbia, Maryland, New Jersey, New York, and Pennsylvania)

**Great Lakes** (Illinois, Indiana, Michigan, Ohio, and Wisconsin)

**Plains** (Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota)

**Southeast** (Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia)

**Southwest** (Arizona, New Mexico, Oklahoma, and Texas) **Rocky Mountain** (Colorado, Idaho, Montana, Utah, and Wyoming)

Far West (Alaska, California, Hawaii, Nevada, Oregon, and Washington)

## Uses of state personal income statistics

State personal income statistics provide a framework for analyzing current economic conditions in each state and can serve as a basis for decision making. For example:

- Federal government agencies use the statistics as a basis for allocating funds and determining matching grants to states. The statistics are also used in forecasting models to project energy and water use.
- State governments use the statistics to project tax revenues and the need for public services.
- Academic regional economists use the statistics for applied research.
- Businesses, trade associations, and labor organizations use the statistics for market research.

Percent changes are expressed at annual rates.

<sup>1.</sup> From charges are expressed at annual rates.

2. Net earnings is earnings by place of work—the sum of wages and salaries, supplements to wages and salaries, and proprietors' income-less contributions for government social insurance plus an adjustment to convert earnings by place of work to a place-of-residence basis.

Note. Estimates may not add to totals because of rounding.
